RANDOLPH AFB, TX 78150-4449

SUBJECT: Task Analysis (TA) Report

1. The attached package contains a copy of the recently published TA for the Ground Radio Communications Specialty, AFSC 2E1X3. This TA was performed by the Training Applications Section of the Air Force Occupational Analysis Program to expand on the information already reported in the Occupational Survey Report for this specialty.

2. TA is an extension of the occupational analysis process. It provides additional details on knowledge, skills, and activities associated with the tasks identified by the occupational analysis process. It also includes information on references and tools associated with doing the task. The TA provides essential information used in initial steps of the Instructional Systems Development process to produce quality training. The information in this TA has application in both developing resident and on-the-job training programs.

3. The project officer for this report is SSgt Diana R. Bryan. Please contact her at DSN 487-~~3694~~ if we can be of assistance in interpreting or applying the results to any training program revision.

PREFACE

The Air Force Occupational Measurement Squadron (AFOMS), Occupational Analysis Flight (OMY), is assigned primary responsibility for developing occupational survey reports (OSRs) and task analyses (TAs) for Air Force specialties. OSRs summarize the results of occupational surveys and identify the structure of a career ladder in terms of jobs performed. TAs identify activities, skills, and knowledge needed to perform those jobs, as well as specific information needed for revision or development of career field education and training plans (CFETPs), specialty training standards (STSs), course training standards (CTSs), initial skills training, on-the-job training (OJT), and career development courses (CDCs). These TAs fulfill most requirements of the analysis phase of the Instructional System Development (ISD) model prescribed in AFM 36-2234, Instructional System Development.

The task analyst for this project was SSgt Diana R. Bryan. TA data were collected and validated at the following locations: 12th Communications Squadron, Randolph AFB, TX; 37th Communications Squadron, Lackland AFB, TX; 76th Communications Squadron, Kelly AFB, TX; and 3rd CCG, Tinker AFB, OK. We would like to express our appreciation to the staff members and subject-matter experts (SMEs) from these units for helping us complete this project.

Detailed TAs were accomplished through interviews with highly qualified SMEs performing each task. The analyses were then validated by additional SMEs at different locations. Each TA is documented on a separate task analysis worksheet (TAW). Task title, publications, team task information, recertification requirements, standards, and equipment support each task. The activities provide step-by-step analysis of how the task is accomplished. Skills are the proficiencies personnel must have to perform the activities. Knowledge is a mental process that involves the recall and application of information.

The Ground Radio Communications TA was developed in conjunction with the 2E1X3 OSR. These reports are available in disk and printed formats to Air Staff sections, major commands (MAJCOMs), the Enlisted Specialty Training (EST) community, and other interested training and management officials upon request. Address requests to AFOMS/OMY, 1550 5th Street East, Randolph AFB TX 78150-4449, DSN 487-6623.

RICHARD C. OURAND, JR., Lt Col, USAF

Air Force Occupational Measurement
Squadron

JOSEPH S. TARTELL
Chief, Occupational Analysis Program
Air Force Occupational Measurement
Squadron

INTRODUCTION

This document provides TA information for the Ground Radio Communications Specialty, AFSC 2E1X3. The analysis encompasses tasks from the AFSC 2E1X3 job inventory (JI) dated September 1992. Tasks selected for analysis are performed by a substantial percentage of 5-skill level personnel occupying the AFSC. The difficulty of the task and relative time spent performing the task, as identified by respondents to the occupational survey, were considered when selecting tasks for analysis. TA data were collected from February through April 1995.

USES OF TA

TA is a primary source of information for personnel developing training programs. TA information, recorded on task analysis worksheets (TAWs), can be useful during Utilization and Training Workshops (U&TWs) and Training Planning Team (TPT) meetings.

TECHNICAL TRAINING

TA information can be used in developing the plan of instruction/syllabus for 2E1X3 specialty courses. Each task is analyzed to determine performance requirements such as which activities must be performed, specific skills and knowledge individuals must possess to do their jobs, and the performance standard that must be achieved. This information is used to develop course objectives and to sequence the training. The standard of performance is also identified on each TAW. The activities listed on the TAWs can be used to develop the teaching steps for a lesson plan. In addition, the TAWs provide an outline for developing student instructional materials (study guides and workbooks).

ON-THE-JOB TRAINING

TA is available for enhancing and standardizing OJT programs. The TAWs contain much of the information required for a successful OJT program. Each TAW has a breakdown of activities, skills, and knowledge needed to do the task, in addition to other descriptive information. These TAWs are designed to be "living documents." Supervisors or trainers can adapt the information to their own OJT programs simply by annotating the TAWs with the unique requirements of their unit.

TASK ANALYSIS WORKSHEET (TAW) FORMAT

1. **TASK ID:** The alpha/numeric task number assigned to each task.
2. **TASK TITLE:** Statement of work analyzed.
3. **TASK NOTES:** Contain notes and explanatory information, if required.
4. **PUBLICATION:** This section lists the governing directives commonly used to perform the task; i.e., technical publications, regulations, operating instructions, and other documents associated with the task.
5. **TEAM TASK INFORMATION:** Identifies tasks that require more than one person to perform. "Y" indicates more than one individual is required to perform tasks. "N" indicates tasks can be done without assistance.
6. **RECERTIFICATION REQUIREMENT CODE:** The number of months between task recertification, if required.
7. **PREREQUISITE TASKS:** Other tasks that must be performed before performance of the current task may begin.
8. **STANDARD:** The criteria a supervisor or evaluator would use to determine proper completion of the task.
9. **PERFORMANCE RESOURCES:** A list of equipment, tools, and supplies, including forms, listings, etc., required to perform the activities involved in the task.
10. **SUBTASK IDENTIFICATION STATEMENT:** The general activities or steps performed to accomplish the task.
11. **SUPPORTING SKILLS AND KNOWLEDGE:** Skill statements represent the physical (psychomotor) processes used. Knowledge, not directly observable, involves the use of mental processes enabling recall of facts, identification of concepts, application of rules or principles, solution of problems, or creative thinking.

PREREQUISITE TASK(S):

O0706, OPERATE PA SYSTEMS

O0707, OPERATIONALLY CHECK PA SYSTEMS

O0710, REMOVE OR REPLACE PA SYSTEM LRUS

STANDARD:

IAW T.O./COMMERCIAL MANUAL/LOCAL OPERATING PROCEDURES

PERFORMANCE RESOURCES:

TEST EQUIPMENT

CONDITION TAGS

COMMON HANDTOOLS

AFTO FORM 349, MAINTENANCE DATA COLLECTION RECORD

CORE AUTOMATED MAINTENANCE SYSTEM (CAMS) COMPUTER

SUBTASK ID/STATEMENT:

01

START MDC/CAMS DOCUMENTATION, IF APPLICABLE

02

GATHER EQUIPMENT AND SUPPLIES

03

GATHER T.O./COMMERCIAL MANUAL/LOCAL PROCEDURES GUIDANCE

04
APPLY POWER TO EQUIPMENT
05
SET UP TEST EQUIPMENT, IF NECESSARY
06
PERFORM TROUBLESHOOTING PROCEDURES TO ISOLATE MALFUNCTION
07
DISCONNECT TEST EQUIPMENT
08
TAG LRU, AS APPROPRIATE
09
RETURN EQUIPMENT AND SUPPLIES
10
UPDATE MDC, IF APPLICABLE

SUPPORTING SKILLS/KNOWLEDGE:

S USE TEST EQUIPMENT
S USE COMMON HANDTOOLS
S USE CORE AUTOMATED MAINTENANCE SYSTEM (CAMS) COMPUTER
K ANNOTATE APPROPRIATE FORM(S)
K RECOGNIZE ELECTRICAL HAZARDS
K RECALL TROUBLESHOOTING PROCEDURES
